

**Specification Amendments:**

Please replace the paragraph starting at the top of page 9, line 1, with the following paragraph:

A plurality of nozzles 217 extend axially along the length of the tip's nozzle portion ~~[[217]]~~ 215. Each nozzle 217 extends through the sidewall of the tip's nozzle portion into the hollow channel extending ~~though~~ through the center of the tubular nozzle ~~[[214]]~~ 215. Nozzles 217 may be implemented as holes in the tip 214. TCM entering the nozzles ~~[[214]]~~ 217 by way of the tip's hollow channel will be expelled onto portions of the interior surface of the sheath 202. In various implementations nozzle holes having a diameter D in the range between and including 0.142" through 0.144" ( $0.142'' \leq D \leq$  ~~[[0.144]]~~ 0.144'') were found to be suitable. Nozzles outside the exemplary range may also be used.
